

# BRAIN BUSTERS

## Wind Energy

### Across

- the unit for power
- the angle into the wind
- a machine that converts one form of energy to another, i.e. mechanical energy to electrical energy
- the part of the turbine that catches air current
- moving air

### Down

- turning the blades away from the wind
- holds and protects the generator
- machine for collecting energy and converting energy for use as power
- the part of the turbine that supports the nacelle
- cross-sectional shape of a blade
